CORALIA REEF

QUALITY POLICY

Our Objectives are to continuously improve our Positive Impact on the Marine Environment, also to seek total customer satisfaction and to carry out a never ending contribution to research studies to enhance the population of fishes and all other forms of Marine Life.

We fund and support the scientific marine biology researches in order to develop newer, safer, more sustainable techniques for the preservation and enhancement of the Marine Environment.

We strive at the implementation of economic and sustainable long-term techniques for the preservation of existing corals and endangered marine life, as well as propagation of corals by building artificial coral reefs; and populating those lifeless marine areas in the shallow waters, by using the proper and innovative fisheries modules

A Quality Management System that gives confidence to the client that the technical and commercial aspects of the service have been carried out as per their requirements.

Complying with legislative requirements (or the specific requirements of our clients) relating to the quality aspect of our product/service and always committed to the continual improvement of the Quality Management System.
